The Max-Pak Difference

Since 1976, Max-Pak has been making quality balers and compactors for the waste industry. It was something we had to do. You see, we're also in the waste paper recycling business, and 30 years ago we couldn't find a baler that performed the way we needed. So we built our own.

Being in the waste business has its advantages when you're designing a baler. Not only do we understand the challenges and demands expected from a baler, we get to test and fine tune our ideas in a real working environment – our own.

For our other baler customers, it means they get the benefit of our front-line experience and our determination to only build the best. A Max-Pak baler is not good enough for our customers unless it's good enough for us.

At Max-Pak we take a personal interest in every machine we sell, and every customer we serve. It comes from our small town heritage. It's who we are. So it also makes sense that we deliver and install every baler ourselves, and then train your operators before we leave. We want you to be a friend and a Max-Pak customer for a long time. That's part of our small town, small company mentality.

But make no mistake. Max-Pak is no lightweight when it comes to balers. You'll find our equipment in some of the most demanding industries, with some of the most particular companies.

Our customers have come to know and trust Max-Pak for productivity, reliability, and integrity. So it's no surprise that over 90% of all Max-Pak balers ever built are still on the job. And we plan to keep it that way.
Because You Have Better Things To Do Than Stop To Tie Up Bales

Whether you’re processing recyclables for a living, or disposing of the waste your business produces, the right baler can make or break you. Some operations can work just fine with balers that require periodic manual labor...like stopping to tie up bales. But if your business is all about high production, and maximum bale weights with minimum fuss, you’re ready for the Max-Pak Horizontal Open End Auto-Tie baler.

This is no occasional baler. It’s designed to work day and night, producing consistent and dense bales with integrity – the kind you can move, stack, and transport efficiently and profitably.

The Auto-Tie can bale a variety of materials, and with 18 different models there’s one to fit your situation. Of course, we can also build every Max-Pak model to your custom requirements, because we realize that standard doesn’t always fit.

Because You Have Better Things To Do Than Stop To Tie Up Bales

Heavy duty construction, unmatched reliability, the highest quality components, plus factory installation and training...the only thing better is a baler that ties automatically.

Consider it done.

HOE Auto-Tie Features
- Automatic Wire Tie System
- Heavy Wall Tubular Steel Frame
- AR 400 Floor and Platen
- Hydraulic Regenerative Circuit and Air/Oil Cooler for High Performance at Lower Oil Temperatures
- Up to 223,839 psi packing force
- NEMA 12 Electrical Panel and Control System
- Conforms to OSHA and ANSI Z245.5 Standards
- Full Factory Delivery, Installation and Training
- One Year Warranty on Parts and Labor
